HALO MARITIME SECURITY BARRIERS

CHANGING THE FACE OF WATERSIDE SECURITY OPERATIONS

The HALO System is a new class of maritime security barriers that protect valued assets and offer ease of operation, while significantly reducing costs. These next generation, Type II Barriers are designed to overcome the shortfalls inherent in the current Type I Barriers. They are based on a fundamentally different approach that transfers kinetic energy to the water surrounding the barrier, resulting in a dramatic increase in stopping power. The HALO Water Barrier System provides a significant physical and visual deterrent that minimizes space required to protect valued assets, while reducing lifecycle costs through use of advanced composite materials, modular assembly, and automatic operation.

A STAND APART PRODUCT

The HALO Water Barrier System consists of the Sentinel Static Barrier and the Guardian Gate/Barrier. The double wall construction designed into both systems can absorb 5,000,000 foot-pounds [6,779 kJ] of kinetic energy. In independent tests the barrier system successfully stopped a 3 ton fast attack boat traveling at 42 knots within 10 feet [3 meters]. The HALO system has also been extensively analyzed and tested in a variety of environmental conditions using numerical modeling techniques, hydrodynamic wave tank testing, and independent operational testing by the U.S. Navy.

GUARDIAN GATE / BARRIER

The Guardian Gate System is a scalable, dynamic maritime gate and barrier designed to operate automatically in harsh marine environments. The patented, accordion style design preserves water space and promotes 24/7 operations with limited manpower and support costs. It can be connected to breakwaters, piers, buoys, or the Sentinel Static Barrier to close off vital protected areas.

Fully modular assembly enables ease and speed of installation and maintenance. The inherently stable system can be customized with optional sensor and security packages, including the Athena Large Vessel Capture System to provide enhanced security against larger threats, or mounted underwater anti-swimmer nets.

SENTINEL STATIC BARRIER

The Sentinel Static Barrier System is a catamaran style structure that seals off vulnerable passages and denies access to critical assets. It protects against a multi-vessel attack by offering multiple rows of structure, interchangeable components, and a high level of redundancy. Its ability to efficiently transfer the kinetic energy of attacks into the surrounding water enables it to reduce threat incursion to near zero.

SETTING STANDARDS, REDEFINING EXPECTATIONS

The HALO Water Barrier System is a next generation design that meets U.S. Navy specifications and is independently tested for functionality, durability, and design.

The system provides assured security in a variety of applications such as harbors, off-shore oil rigs, and port infrastructure. These next generation water barriers provide significantly reduced operational costs and total cost of ownership.

ABOUT OUR COMPANY

HALO Maritime Defense Systems was founded in 2000 to develop the premier maritime sea barrier system for preventing attacks on any water accessed asset. We work with governments and industry to provide complete maritime security solutions.

Our team is comprised of leading executives from industry, the military, and academia with the ability to plan and execute substantial, customized security initiatives worldwide.

To speak with an HMDS representative regarding your specific security needs, call us at the number below or submit an inquiry online.

JOIN THE GLORIA DEO JIU-JITSU CLUB

STARTING SEPTEMBER 6TH
ALL AGES - TUESDAYS FROM 3:45PM-4:45PM

Family Life Center @ Riverside Community Church

COME & LEARN:

- Respect
- Self Discipline
- Self Defense
- Competition
- Conditioning

\$90/month for 1 class per week. \$130 for unlimited classes*

*Additional classes are offered at 1786 Rustic Oak Ln., Spring Branch, TX, 78070.
Uniform & Belt cost (\$75) not included in monthly tuition.

BRAZILIAN JIU-JITSU

Instructor - Charles Reid

Join us for training in the "gentle art" as we learn practical and effective self-defense techniques, get stronger and faster through rigorous conditioning, and grow in our confidence through consistent drilling and application of techniques.

Unlike many martial arts that focus on striking as the primary method of both attack and defense, Jiu Jitsu is a grappling art-form that allows a much smaller opponent to neutralize the threat of even a larger opponent through the effective application of leverage, momentum, joint locks, chokes and other submissions. Mixed Martial Arts (MMA) pulls elements from grappling styles like Jiu-Jitsu, Wrestling and Judo and incorporates striking concepts from styles like Muay Thai, Boxing, and Karate. Our Self Defense classes combine the best of our martial arts curriculum to provide you and your family with practical and effective tools to be confident in any given situation.
